

## How the Survey was Conducted

---

### **Nature of the Sample: Knights of Columbus/Marist Poll of 2,729 National Adults**

This survey of 2,729 adults was conducted December 12<sup>th</sup> through December 19<sup>th</sup>, 2016 by The Marist Poll, sponsored and funded in partnership with The Knights of Columbus. Adults 18 years of age and older residing in the contiguous United States were contacted on landline or mobile numbers and interviewed in English or Spanish by telephone using live interviewers. Landline telephone numbers were randomly selected based upon a list of telephone exchanges from throughout the nation from ASDE Survey Sampler, Inc. The exchanges were selected to ensure that each region was represented in proportion to its population. Respondents in the household were randomly selected by first asking for the youngest male. This landline sample was combined with respondents reached through random dialing of cell phone numbers from Survey Sampling International. After the interviews were completed, the two samples were combined and balanced to reflect the 2013 American Community Survey 1-year estimates for age, gender, income, race, and region. Results are statistically significant within  $\pm 1.9$  percentage points. There are 643 Catholic Americans and 341 Catholic Americans who practice their faith. The results for these subsets are statistically significant within  $\pm 3.9$  percentage points and  $\pm 5.3$  percentage points, respectively. The error margin was not adjusted for sample weights and increases for cross-tabulations.
